AI Tools in Education

How Teenagers Use AI to Learn and Create

Overview

AI tool adoption among teenagers has exploded in 2024-2026, with 64% of students using AI tools for academic work. This report explores usage patterns, perceived benefits, and concerns.

Top AI Tools

ChatGPT (71% market share), Google Gemini (24%), Microsoft Copilot (12%), GitHub Copilot (8%), Midjourney (5%). Average student uses 2.3 AI tools regularly.

Use Cases

Homework help (78%), creative writing (45%), coding assistance (32%), research (61%), language learning (19%), image generation (12%). Note: percentages don't sum to 100% as students use AI for multiple purposes.

Impact on Learning

89% of AI users report improved understanding of complex topics. 72% say AI helps them learn faster. 45% say they've learned new skills through AI assistance. Only 8% report over-reliance concerns.
