Digital Wellness & Mental Health

Balancing Screen Time with Wellbeing

Mental Health Impact

23% of students report negative mental health impacts from screen time (anxiety, sleep issues, eye strain). However, 71% report positive impacts when screens are used for learning and connection.

Wellness Strategies

Top strategies that work: (1) Scheduled screen breaks (45%), (2) Blue light filters (38%), (3) Outdoor activities (61%), (4) Sleep hygiene (29%), (5) Limited social media (34%).

Sleep Patterns

Average student sleeps 6.8 hours/night. 47% use screens within 1 hour of bed. Those who don't report 22% better sleep quality. Sleep is the #1 area needing improvement.

Recommendations

Implement 'no screens 1 hour before bed' rule. Take 10-minute breaks every hour. Use blue light filters after sunset. Balance digital activities with physical ones.
