The Attention Span Myth

Data on teen attention and learning

Analysis

Common claim: 'Gen Z has 8-second attention spans'. Our data: 71% of students watch 30+ minute educational videos regularly. Attention isn't shorter; it's more selective. The right content holds attention; the wrong content loses it. Quality over quantity.

Key Statistics

78% of students use YouTube for self-directed learning. Average screen time: 4.7 hours/day, of which 67% is educational. 64% of students use AI tools, with 89% reporting improved learning. 71% have turned a screen hobby into a measurable skill. Top learning platforms: YouTube, Khan Academy, Discord, Coursera.

Methodology

Data collected via 8-step anonymous survey, n=150+ students, ages 14-19, across 12 Indian cities. AI analysis using Google Gemini 2.0 Flash. Statistical analysis with Python pandas/scipy. Confidence interval: 95%.

Implications

These findings have significant implications for educators, parents, and policymakers. Common claim: 'Gen Z has 8-second attention spans'. We recommend further research and pilot programs.
