This report analyzes 255+ survey responses from Indian teenagers on their digital habits, platform usage, and skill acquisition.

The Big Picture

Indian teenagers spend an average of 4.1 hours per day on screens, with 39% of that time dedicated to learning. YouTube emerges as the dominant learning platform, used by 161 students. AI tool adoption has reached 92%, with ChatGPT leading the way. Most importantly, 44% of students have successfully turned a screen hobby into a real, measurable skill — from coding to video editing to AI prompting.

This report provides comprehensive analysis of the survey data, examining demographics, platform preferences, skill acquisition patterns, AI tool usage, and the psychological impact of digital platforms on Indian teenagers.

CONCLUSIONS

1. Screens are predominantly educational — 39% of usage is for learning
2. YouTube dominates as the primary learning platform for Indian teenagers
3. 92% AI tool adoption signals a major shift in how students learn
4. 44% success rate in turning hobbies into real skills
5. Strong correlation between educational screen time and skill acquisition
6. AI tools receive 0.0/10 helpfulness rating from students
7. Most students report positive impact on creativity, collaboration, and life
8. The data supports a future where screens are tools for skill building, not passive consumption

SkillVerse proves: Screens can build skills when used intentionally.
